

TASK 12 — HTML FORMS (Complete Beginner Assignment)

Goal:

Teach students how to build a complete HTML form using labels, inputs, select, datalist, textarea, fieldset, legend, and buttons with validation attributes.

File Name: task12_form.html

1. FORM TAG

Every form must include:

- action="" → where data goes after submit
- method="GET" or "POST"

2. LABEL + INPUT FIELDS

Attributes to practice:

- type, name, id, placeholder
- autocomplete
- required
- autofocus
- pattern
- min, max, step
- value

Input types required:

- text (Name)
- password (Password)
- tel (Phone with pattern [0-9]{10})
- number (Age with min, max)
- radio (Gender selection)
- checkbox (Accept Terms)
- submit (Submit form)

3. SELECT DROPDOWN

Student must add:

- select
- option (value, selected)
- optgroup (label)
- size attribute

Example requirement:

Country selection with Asia and Europe groups.

4. DATALIST

Create an input connected to a datalist.

Example: Favorite Language (HTML, CSS, JS, Python)

5. FIELDSET + LEGEND

Group related items using fieldset and name the group using legend.

6. TEXTAREA

Attributes to use:

- cols
- rows
- placeholder

7. BUTTONS

Student must include:

- `<button type="submit">Submit</button>`
- `<button type="reset">Clear</button>`

FINAL OUTPUT REQUIREMENT

A complete form containing:

- ✓ form (action + method)
- ✓ labels linked with inputs
- ✓ text, password, tel, number
- ✓ radio buttons
- ✓ checkbox
- ✓ select + option + optgroup
- ✓ datalist
- ✓ fieldset + legend
- ✓ textarea
- ✓ submit + reset buttons

This task teaches students how real HTML forms are built professionally.
